

HTML practice questions

Here are some **HTML practice questions** to help you apply what you've learned:

1. Basic Structure

- Create a basic HTML document with a title, metadata, and a visible heading in the `<body>`.
-

2. Headings and Paragraphs

- Create a webpage with:
 - A main heading (`<h1>`), a subheading (`<h2>`), and a paragraph.
 - Add another paragraph that contains a bold and italic word using appropriate tags.
-

3. Links and Lists

- Add:
 - A hyperlink that opens in a new tab (`target="_blank"`).
 - An unordered list with three items.
 - An ordered list with three items.
-

4. Semantic Tags

- Structure a webpage using the following tags:
 - `<header>` for a title and navigation links.
 - `<main>` for an article containing two paragraphs.
 - `<aside>` for additional links or a short advertisement.
 - `<footer>` for contact information.
-

5. Attributes

- Create an image tag (``) with the following attributes:
 - A `src` attribute pointing to a placeholder image (e.g., `https://via.placeholder.com/150`).
 - An `alt` attribute describing the image.
 - A `width` attribute to set the image's width to 150px.
